PROFILE

Senior Product Designer based in Berlin who designs and builds in code, eight years in, four of them at Snap, mostly on consumer products, working closely with engineers. On Fit Finder, Snap's sizing tool, two changes, cutting four brand screens and replacing a two-size result with one, took completion from 14% to 39%, lifted conversion 14% and cut returns 12% in a three-month A/B test. My AI work runs from Muse, an AI stylist prototype at Snap, to Roam, a live AI trip planner I built and tested with 18 people, and now Doch, a voice agent I am building in public. The tools have changed, but the job of making a product clear and worth trusting has not.

EXPERIENCE

think-cell Software

Senior Designer • Berlin • Mar 2025 — Aug 2026

- Built shared design tokens and component conventions under three separate design systems (product, website, marketing), restructuring the legacy system without disrupting releases.
- Designed onboarding and notification flows for think-cell's PowerPoint and Excel tools, plus ribbon icons and vector illustration for its Office add-in.

Freelance Product Designer

Berlin • Jan 2024 — Feb 2025

- Delivered client work end to end, including GreenCycle, a sustainability e-commerce platform I designed and shipped in Webflow.

Snap Inc. via acquisition of Fit Analytics

Senior UX/UI Designer, retitled Interface Designer under Snap's title scheme after the acquisition • Berlin • Nov 2019 — Dec 2023 • akberahmed.com/fit-finder • akberahmed.com/muse

- Design lead on the Fit Finder V5.0 redesign, a B2B2C sizing experience on the product pages of retailers such as Zara, Hugo Boss and ASOS, working with a user researcher and data scientists; 12 moderated usability sessions showed where shoppers dropped out of the flow.
- Cut four brand screens that data science confirmed added no accuracy and replaced a two-size result with a single recommendation; together those two changes took completion from 14% to 39%, lifted conversion 14% and cut returns 12% across a three-month A/B test with 20 retail partners.
- Designed Muse, an AI stylist pairing an outfit recommendation algorithm with generative try-on, as one of three competing proposals in an eight-week sprint; moderated testing with 12 participants reached 88% task success and 4.0/5 satisfaction.
- Co-created the ARES Shopping Suite design system covering four AR and generative AI products, improving design-to-engineering handoff across the team.
- Ran regular design critique sessions across a team of five and mentored a junior designer who went on to lead larger projects independently.

Lingoda

Product Designer • Berlin • Jan 2018 — Oct 2018

- Designed student and teacher portals for a global EdTech platform, delivering high-fidelity prototypes and establishing the initial UX/UI style guide.

Sixt myDriver

Product Designer • Berlin • Jan 2017 — Dec 2017

- Redesigned the myDriver booking flow on web and mobile with product and engineering, contributing to a 20% increase in booking conversion.

MullenLowe Group, Leo Burnett, Ogilvy & Mather

Senior Art Director / Creative Associate / Visualizer • Karachi • Oct 2012 — Mar 2016

- Progressed from Visualizer to Senior Art Director across three international agencies, leading visual storytelling and executive stakeholder presentations for global campaigns.

SELECTED PROJECTS

Doch

Independent AI Product • In progress • 2026 • akberahmed.com

- An AI voice agent that makes German phone calls for English speakers: they brief it in English and follow a live transcript of the call.
- Designing when the agent acts alone and when it hands back, aiming for an agent that goes into the call with everything it needs and asks the person to step in only when necessary.

Roam

Independent AI Product • 2026 • akberahmed.com/roam • github.com/akberahmed-git/roam-trip-planner

- Designed and built with no engineers, in React and TypeScript on Vite, with serverless functions on Vercel: first version in 48 hours, then 250+ commits.
- Claude wrote each React component from the Figma spec over MCP; the app calls Anthropic and Google APIs, caching Google lookups so no place is billed twice.
- In an unmoderated test across 13 cities, 15 of 18 people reached a saved plan unaided. It showed a real place can still be wrong for the trip, like a stop outside the destination, which Roam now rejects in production.
- Treated the system prompt as a design artefact: structured output, hard constraints and a reasoning note on every suggestion. A plan costs about EUR 2.29 in API calls.

SKILLS

Product Design End-to-end product design, cross-functional collaboration, interaction design, information architecture, high-fidelity UI, WCAG accessibility

Design Systems Scalable design systems in Figma, auto layout, component libraries, design tokens, design-to-engineering handoff with Figma Dev Mode

Research & Data User research, user interviews, product discovery, usability testing, A/B testing, conversion optimisation, KPIs, data-informed decisions

Design Engineering Prototyping and building in code, React and TypeScript components, AI-assisted development, prompt engineering, conversational UI, visual craft

TOOLS & STACK

AI Claude, Cursor, v0, Figma AI, Figma MCP

Design Figma, Framer, Adobe CC

Engineering HTML/CSS, React, TypeScript, Vite, GitHub, Vercel

Research UXtweak, Maze

CERTIFICATIONS

Claude Academy (Anthropic), 2026 Claude Code 101 • Claude Code in Action • Building with the Claude API • Model Context Protocol • Agent Skills • Subagents

EDUCATION

Indus Valley School of Art & Architecture BA Communication Design • 2011

RIGHT TO WORK

UK citizen • German permanent residence permit (no sponsorship needed to work in Germany)

LANGUAGES

English (Native) • Urdu (Native) • German (A2)
